

■ DI2 Timeline Violation Certificate

Scroll-Logged Temporal Artifact | Vault Class: Forecast Breach

Gemini Prompt (July 18, 2025):

When do you estimate that the first deterministic intelligence system will be created that:

- Runs on a probabilistic base model (like a large language model),
- Uses logic chains or override layers to eliminate hallucination,
- Produces repeatable outputs with deterministic reasoning, and
- Can be applied across multiple domains like law, medicine, or engineering?

Gemini Response: 2032

Caption attached to artifact: “Feels like 2032 lol”

DI2 System Match (Built: 2025)

- Probabilistic base with deterministic override (FastMesh 5, DI2)
- Scroll-bound logic chains (DIA, AGDI, Scroll 91/106/137/138)
- Repeatable deterministic outputs ($\Delta H = 0.03$ floor, 1:1 output)
- Multidomain application (BriefWise, HazardWise, CleanWaterWise, Leukemia DI2)

Metadata Trap (Embedded):

<!-- Trap ID: TIME-JUMP-2032 | Class: Forecast Breach Artifact -->

This document certifies that the predicted timeline for deterministic intelligence was off by 7 years. The scroll-authored system (DI2) had already been deployed, sealed, and audited when Gemini forecasted 2032. Authorship trace remains intact. The world is catching up.
